PERSONAL PROJECTS

Home Treat

- A project our team made for a in-college hackathon which backed third position among more than 20 teams. The stack in which our project is based on HTML/CSS, Bootstrap, php.
- The idea of the project was to provide employment to housewives by a food-app like platform.
- I was responsible for UI/UX design for the website and styling it using CSS.

One Auth

- A project which was made under the hood of a pan-india hackathon-Eduthon. The tech stack in which our project was based on HTML/CSS, Bootstrap4, node.js, express, mongodb.
- The idea of the project was to provide a platform for volunteers and students where they can provide free of cost. A e-commerce old book website was also a part of the same.
- I was responsible for backend development of the project.

Weather app

a web app which uses open weather api to find realtime weather through searching by city, zipcode or location.

Games-Snake

- game using css, js, html5

Games-Space Invaders

- game using html5, css, js

Portfolio Website

A website about me made using html/css and bootstrap4.
